Attached are photos of the current flood conditions. There is a lot of debris coming down the river and the current is moving fast. Residents are extremely concerned about the barges being stored nearby and the integrity of the Pits. As you can see from the photos, the buoys are no longer where they were placed. We need the Waste Pits removed from the San Jacinto River and taken to a safe, stable location. As long as they are in the flood prone river, residents will live in fear. Water is in many of their homes right now in Channelview and Highlands.

Thank you,
Jackie Young

Gary,

I'm receiving reports from community members that there is debris stuck on top of the Waste Pits cap, heavy debris floating down river, and one of the dolphin structures directly across from the Pits on the eastern bank has collapsed.

This is extremely concerning for the current integrity of the cap and the future potential of containment being considered as a long term remedy. If the floodwaters/debris was strong enough to collapse one of the dolphin/bumper structures, I would imagine the cap has also been compromised.

Please let me know how the EPA will respond to this so I can let the community know. As of right now, the water is still rising.

Thank you,
Jackie Young
